

Tectum panels are designed and manufactured for the lifetime of the building and should not need to be removed or disposed of as long as the building is in use. When it becomes necessary to dispose of Tectum panels, the following options are recommended:

Reuse

Tectum panels can be reused. Panels can be cleaned and repainted to look like new. Tectum panels can be cleaned by following the instructions in **M-54 Cleaning Tectum Panels**. Once cleaned, Tectum panels can be repainted following the instructions outlined in **M-77 Field Painting Tectum Panels**.

Dispose

If Tectum panels must be disposed of, they should be placed in a landfill. The ph content of Tectum panels will help to neutralize the acidity often found in landfills.

Compost

Tectum panels can be ground up and composted onsite eliminating need for transportation of waste material.
